Question 1

Project Proposal

100 / 100 pts

- **– 0 pts** Correct
- **– 10 pts** On-time submission problem.
- **– 10 pts** Page Limit Problem
- **– 10 pts** Formatting Problem. Please refer to the project guideline file for the correct formatting.
- **– 10 pts** Structure problem. Please refer to the project guideline file for the correct structure
- **– 0 pts** What is backup plan for the data?
- **– 0 pts** The project proposal successfully met the requirements.
- ✔ **– 0 pts** Please include the group id in the report
- **– 3 pts** Formatting problem with minor issues.
- **– 0 pts** Please add your project ID for future submission
- **– 0 pts** Click here to replace this description.

It would strengthen your proposal if you clearly define which machine learning algorithms you plan to implement, as this will help guide the project's direction.

Question assigned to the following page: 1

Soccer Dataset Prediction and Analysis

1 Data Set

Our project will use the European Soccer Dataset . It contains 25,000 matches, 10,000 players, 11 European Countries with their lead championships, players and teams attributes, and detailed match events, including weekly updates ranging from seasons 2008 to 2016.

2 Project Idea

Our project aims to achieve two primary objectives: predicting top performers in their specific categories and forecasting the outcome of a given match. To accomplish these tasks, we need to conduct thorough exploratory data analysis (EDA) to identify correlations between various metrics for both players and teams.

3 Software to Write

We will majorly use Python to perform exploratory data analysis and predict the outliers/best performers along with match result prediction.

4 Relevant Papers

PlayeRank: Data-driven Performance Evaluation and Player Ranking in Soccer via a Machine Learning Approach. ACM Trans. Intell. Syst. Technol. 10, 5, Article 59 (September 2019), 27 pages. https://doi.org/10.1145/3343172

5 Division of Work

We plan to split each component of the project evenly among the team. To start, we'll break down the exploratory data analysis (EDA) into three segments: players, teams, and matches. For the prediction phase, we will explore and implement various prediction and anomaly detection techniques for identifying outliers, predicting match scores, and forecasting match results, and then distribute these tasks among ourselves accordingly.

6 Midterm Milestone

By the midterm checkpoint, we will complete the exploratory data analysis and provide a deeper understanding of the correlations between the various attributes. Additionally, we will present initial prediction results for player performances and team performance/outcomes.
